

## **Performance Recording Timeline**

The following table details the performance information that currently contributes to the calculation of BREEDPLAN EBVs and outlines the stage of the production cycle that each set of information should be recorded.

| <b>Joining</b>   | <b>Birth</b>   | <b>Weaning</b>  | <b>Yearling</b>                         | <b>18 months</b>   | <b>Maturity</b>   |
|--|--|---|---|--|---|
| Mating Details: <ul style="list-style-type: none"><li>• AI Date</li><li>• AI Program Type</li><li>• Bull In date</li><li>• Bull Out date</li><li>• Preg Test Results</li></ul> | Date of Birth<br>Birth Weight<br>Calving Difficulty Score<br>Recipient Dam Details | 200 Day Weight<br>Mature Cow Weight (on dams)<br>Docility Score | 400 Day Weight<br>Scrotal Circumference | 600 Day Weight<br>Scanning Measures (EMA, Fats, IMF%)<br>Abattoir Carcase Data | Cow Disposal Code (Heifers and Cows)<br>Mature Cow Weight |

\*\* Nb. Members of BREEDPLAN are not required to record all the above information for each particular animal. Members should aim to record the traits that are important to their breeding objective or that of their clients (at a minimum).
